

Optometry & Visual Performance Author Guidelines

These Guidelines for Authors have been developed to make it as easy as possible for authors to complete the peer review process successfully. Please follow these guidelines exactly.

Audience and Circulation

Optometry & Visual Performance, the official publication of the Australasian College of Behavioural Optometry and the Optometric Extension Program Foundation (hereafter referred to as the representative organizations), has an international circulation of more than 4000, including the membership of the representative organizations, optometry students, and residents. Issues are distributed bi-monthly internationally. *OVP* is provided to libraries, schools and colleges of optometry, and others who may request copies. It is also available online. Online articles are available with enhanced content (videos, extra tables/figures/photos, links, etc.).

Manuscript Instructions

These instructions apply to all manuscripts and are in accordance with the Uniform Requirements for Manuscripts Submitted to Biomedical Journals (Uniform Requirements).^{1,2}

Manuscripts

Submission of manuscripts is done through the following portal. <http://www.editorialmanager.com/ovp/default.aspx>. The author should receive an acknowledgement of the manuscripts being received within 24 hours. If you do not, please re-email the manuscript or call the managing editor (901-722-3335). There is no charge for article submission when publishing with *OVP*.

Criteria

Manuscripts are judged on one or more of the following criteria:

- Usefulness to the practicing optometrist.
- Compliance with the editorial standards and objectives of the journal with regard to the originality of the contribution, its clinical or scientific significance to the profession, and the suitability of the subject matter.
- Enrichment of the optometric and other scientific literature.

Optometry and Visual Performance generally publishes eight basic types of articles:

1. Research reports:

Apart from reporting formal laboratory or clinical research or the results of surveys, the format of an original

- research paper can also be used for reporting case studies involving a series of related clinical cases.
2. **Clinical procedures:**
This can be used to present a new clinical procedure or an established procedure being used in a new manner relating to clinical diagnosis, management, or treatment.
 3. **Case reports:**
This can be used to present a case report when that case report illustrates a viewpoint on clinical diagnosis, management, or treatment.
 4. **Literature review:**
This includes comprehensive review of a broad or complex subject. The reference list can be extensive if one of the intentions of the research underpinning the review is the compilation of a comprehensive bibliography. Otherwise, the reference list should be limited to the originating references and the most important and/or most recent subsequent references.
 5. **Practice management manuscripts:**
Topics covered may include billing and coding, insurance, staffing, etc.
 6. **Guest editorials:**
Most editorials are invited, but unsolicited editorials are welcome. Please speak to the Editor-in-Chief prior to the submission of an editorial to discuss the potential topic.
 7. **Book Reviews:**
This includes not only what is covered in the book and the manner in which it is covered but why it is relevant to optometrists.
 8. **Viewpoints:**
These are articles that make an observation, express a viewpoint, or argue a particular interpretation of facts. They can discuss an issue in visual science, vision therapy and rehabilitation, diagnosis, treatment, public health, or public health policy.

Authorship requirements

One author should act as correspondent and on submission of the manuscript should provide his/her address, phone and fax numbers, and e-mail address. Manuscripts should have no more than six authors. Each author must be willing to take public responsibility for the paper. Data collection does not in itself justify authorship. Credit for authorship must also include: (1) conception or design, analysis and interpretation of data, or both; (2) drafting (or revising) paper for critically important intellectual content; and (3) final approval of the version to be published. *OVP* may require authors to justify assignment of authorship.

Conflict of Interest

All authors must disclose upon submission the existence of any financial arrangement with a company whose products figure prominently in the manuscript or with any competitor company. For articles in which frequent references are made to name-brand devices, medications, or products, whether any of the authors has such an affiliation or not, a disclaimer should be submitted for clarification and published at the end of the article.

Ethical/Legal Considerations

A submitted manuscript must be an original contribution not previously published (except as an abstract or a preliminary report), must not be under consideration for publication elsewhere, and, if accepted, must not be published elsewhere in similar form, in any language, without the consent of the *OVP* Editor-in-Chief (on behalf of the Optometric Extension Program Foundation). Each person listed as an author is expected to have participated in the study to a significant extent. During the manuscript submission process, the corresponding author will be required to state that *all* authors accept public responsibility for the manuscript. Although the editors and referees make every effort to ensure the validity of published manuscripts, the final responsibility rests with the authors, not with the Journal, its editors, or the publisher. All manuscripts must be submitted via email as per the guidelines. See submission instructions, under “Manuscripts.”

Human Subjects and Informed Consent/Animal Subjects: If human subjects were involved in the study, the authors must confirm that the research followed the tenets of the Declaration of Helsinki, that informed consent was obtained from the subjects after explanation of the nature and possible consequences of the study, and, where applicable, that the research was approved by the appropriate institutional review board (IRB). A statement confirming this must appear in the Methods section of the manuscript.

It is the author’s responsibility to ensure that a patient’s anonymity be carefully protected and that all guidelines for experimental investigation with human subjects required by the institution(s) with which each of the authors are affiliated were followed. Authors should mask identifying features and remove patients’ names from figures unless they obtain written consent from the patients and submit written consent with the manuscript.

All authors of research involving animals are expected to follow the ARVO guidelines, outlined in detail

at: http://www.arvo.org/eweb/dynamicpage.aspx?site_arvo2&webcode_AnimalsResearch#Recommended%20References.

Disclosure statement: Each author must warrant that he or she has no commercial associations (e.g., consultancies, stock ownership, equity interest, patent/licensing arrangements, etc.) that might be perceived as a conflict of interest in connection with the submitted manuscript. If a commercial interest or potential conflict of interest exists, it ***MUST*** be disclosed for each author during the submission process and included in the “ACKNOWLEDGMENTS” of the manuscript. All funding sources supporting the Work and all institutional or corporate affiliations of the authors are also to be listed in the “ACKNOWLEDGMENTS.”

Copyright

Consideration for publication is based upon assurance that the manuscript (in whole or in part) is neither being considered by any other publication, nor has it been previously published. Authors who have submitted an article for review automatically have transferred copyright to *OVP* and OEPP when it is accepted for publication in the Journal. Authors retain ‘**unrestricted**’ publishing rights (authors have rights to republish the article elsewhere without restrictions, such as individual person’s blog, department webpages, etc. It does not include the case that authors republish the article as it is in another academic journal, which is regarded as duplicate publication.) Should permission be desired by authors, translators, or future publisher(s) to reprint all or portions of an article published by *OVP* (including the use of figures or tables), a formal written request must be submitted to the managing editor.

Peer review and manuscript processing

Manuscripts are acknowledged upon receipt; rejected manuscripts are returned within 6-12 weeks. Papers are peer-reviewed by two or more content experts, who serve as referees. The peer-review process is open, meaning the reviewers know the identity of the author(s). Referees’ identities are kept confidential. The peer review cycle takes approximately 2-4 months. Every effort is made to publish manuscripts in a timely fashion. There is no charge for article processing when publishing with *OVP*.

Title Page

The title page should contain only the manuscript title, name(s) of Author(s), and degree(s). Professional or institutional affiliations of authors should also be provided. The title page should list the contact information for the corresponding author, including the address, phone and fax numbers, and e-mail address.

The following should be placed at the bottom of the article:

Correspondence regarding this article should be emailed to [Primary author's email address here] or sent to [Primary author's name and address here]. All statements are the author's personal opinion and may not reflect the opinions of the representative organizations, *Optometry & Visual Performance*, or any institution or organization with which the author(s) may be affiliated. Permission to use reprints of this article must be obtained from the editor. Copyright [year] Optometric Extension Program Foundation. *OVP* is indexed in the Directory of Open Access Journals. Online access is available at

www.acbo.org.au, www.oepf.org, and www.ovpjournal.org.

Abstract

The abstract should be no longer than 300 words in length consisting of four basic sections: Background, Methods, Results, and Conclusions, which should briefly describe, respectively: the problem or topic addressed, how the study was conducted, the most important results, and what can be concluded from the results.

For Case Reports, substitute Case Report(s) for Methods and Results, and succinctly describe the case(s) (i.e., Background, Case Report, Conclusions).

Editorials require no abstracts, but a brief executive summary is encouraged.

Keywords

Include three to eight Keywords (or short phrases) at the end of the abstract. Keywords should make the article easy to find electronically.

Tables and illustrations

An appropriate number of photographs, tables, figures, and illustrations is encouraged. Authors should consult the CBE Style Manual for further information on the preparation of tables, figures, and other illustrative material.³ All should go on separate pages at the end of the paper. DO NOT embed tables, figures, or illustrative material within the body of the paper. If you are using a table, figure, or illustration from another source, a signed permission to do so must accompany the submission of the paper.

Photographs

All photographs of identifiable individuals require photograph release forms signed by the person(s) in the picture and sent to the editor before the paper can be published. All photographs must be sent as separate files in JPG format. DO NOT embed photographs within the body of the paper. Images (photos or illustrations) should be in the JPG format, at least 300 pixels per inch, no smaller than 500kb and no larger than 6Mb. Please do not submit images captured from a website, as they are not suitable for print publication. When saving your .JPG file, save as Baseline Standard, best quality, and not progressive or optimized. If you are not sure about the quality of your images, please contact the managing editor to verify well in advance of the submission deadline.

Style

Authors should use the active voice (“This study shows” rather than “It is shown by this study”) and the first person (“I did” rather than “the author did”). The past tense is appropriate for describing what was done in an experiment; the present tense is suitable for referring to data in tables and figures.

Lens formulas and associated acuities should be expressed as in the following example:

OD: +2.25-1.00x95, 20/20 (6/6).

Abbreviations

Except for units of measurement, abbreviations are discouraged. The first time abbreviations or acronyms are used, they should be spelled out.

Generic and proprietary names

Use generic names in referring to drugs. Use proprietary names only to differentiate between drug forms or if a specific product was used in a study or associated with an adverse drug reaction. Instruments, devices, or other products may be referred to by their proprietary names. Provide the name and location (city/state or country) of the manufacturer (domestic or foreign) and set in parentheses following the first mention of the proprietary name.

Units of measurement

Authors should express all measurements in conventional units.

References

Use MS Word “Insert,” “Reference,” “Footnote,” “Endnotes” options for inserting references in the manuscript. Use numbers starting with the number “1” and place all references at the end of the paper. *OV/P* uses the Vancouver style from Uniform Requirements throughout the manuscript. (Go to <http://www.icmje.org> and http://www.nlm.nih.gov/bsd/uniform_requirements.html for more information about references)

Always list four authors and then add “et al.” if more than four authors are on the paper.

Basic examples of the Vancouver style are provided here:

Journal article on the Internet

Abood S. Quality improvement initiative in nursing homes: the ANA acts in an advisory role. *Am J Nurs* [serial on the Internet]. 2002 Jun [cited 2002 Aug 12];102(6):[about 3 p.]. Available from: <http://www.nursingworld.org/AJN/2002/june/Wawatch.htm>

Homepage/Web site

Cancer-Pain.org [homepage on the Internet]. New York: Association of Cancer Online Resources, Inc.; c2000-01 [updated 2002 May 16; cited 2002 Jul 9]. Available from: <http://www.cancer-pain.org/>.

References must be numbered consecutively as cited in the paper. References to personal communication, unpublished information, and papers either “in preparation” or “submitted for publication” are discouraged. A reference may be cited as “in press” only if it has been accepted for publication.

Accepted manuscripts

Accepted manuscripts are returned to authors for revisions and copy-editing changes. Authors must be able to take public responsibility for all statements in their paper, including those changes made by the copy editor and authorized by the corresponding author. Revised manuscripts must be returned to the editor in electronic form. The revised copy should have the word “revised (put date)” as part of the file name. PC or Macintosh word-processing software is acceptable (MS Word preferred).

Review by author(s)

Before publication, the corresponding author will receive page proofs for final review. These will be e-mailed as a PDF file. Corrections must be returned/communicated to the managing editor of *OVP* within 72 hours.

Reprints

Reprints and/or PDFs of articles maybe available upon request.
